

DecideIT

The answer for analytical support!

What is DecideIT?

DecideIT

- is a unique tool for supporting gradual decision processes to a well substantiated decision.
- manages a wide variety of qualitative and quantitative information in various mixtures.
- models both uncertainty and different perspectives as well as supports risk analyses and consequence estimates in a unified analytical framework.
- documents and stores all the background information and the analyses.
- presents the results in clear graphics.

How it helps You!

DecideIT

- manages all strong requirements not the decision maker (DM).
- helps the DM to enter statements of various kinds, also stating the degree of uncertainty in a natural format.
- helps you gradually to expand the decision models and interactively get information if and where more information is needed.
- also presents how robust the result is and how it can be strengthened if needed.
- has a user-friendly interface and provide structural support.

Who is in favor of DecidIT?

- Procurement specialists
- Risk managers and analysts
- CSOs, CISOs, CCSs,
- Organizational and management consultants
- System designers
- National and regional planners
- Policy makers

...

In short, decision makers within the Public and Private sector with a common goal: To control their decision processes and get guidance on how to act!
